**EDUCATIONAL AIMS:** The PhD program in Molecular Biomedicine aims to provide higher education to young University graduates in biomedical – and scientific in general – disciplines, to prepare them for a career in basic, clinical or translational research in the field of molecular medicine, with specific reference to the areas of molecular oncology, metabolic diseases, molecular genetics, biochemistry, cell biology, regenerative medicine, and pharmacology. Key to the program is research activity in the laboratory, where students develop a critical approach to scientific observation and carry out a specific project; such research is expected to be translated into one or more publications in international peer-reviewed

journals.

To provide specific competences the Program organizes intensive courses on the core disciplines of modern bimolecular science. The teaching activity of the Program relies essentially on seminars given by national and international experts. The program also aims to provide students with expertise in science management, more specifically in “grant-writing”, and the development of technologically oriented research projects. The PhD program in Molecular Biomedicine is a logical choice for young University graduates in biomedical subjects (e.g. Medicine, Biology, Biotechnology, Pharmacology), but also other experimentally oriented fields of study (e.g. Physics, Chemistry), who wish to pursue a career in basic and translational biomedical research. The PhD program covers the following fields of research: Molecular oncology, Molecular Pathophysiology, Molecular Microbiology, Tissue engineering, Regenerative Medicine, Molecular therapeutics and diagnostics.

The program gathers a significant number of researchers with strong experience in many fields of biomedicine, and offers to prospective students a broad set of choices spanning the entire spectrum of modern research in molecular medicine. The PhD program is part of a newly created Italian Network of PhD programs in biomedical and biotechnological sciences (NEIDOS, <http://dev.neidos.it>) which involves the two major scientific societies in this field: the Association of Cell Biology and Differentiation (Associazione Biologia Cellulare e Differenziamento, ABCD) and the Italian Society of Biophysics and Molecular Biology (Società Italiana di Biofisica e Biologia Molecolare, SIBBM). NEIDOS is a spontaneous gathering of Italian Graduate Schools and Courses, which aims at an overall improvement of the training and educational activities offered by national graduate programs, to make them more attractive to bright, talented and highly motivated students, both nationally and internationally.
